bAMAZON

Author:Ravinder Soni

Description:

bAmazon is developed in MySQL and Node.js JavaScript

the table creation file is bamazonmain.sql

all the queries are stored in STORED PROCEDURES and CALLED from NODE.JS.

This is written according to instructions from CODEING BOOT CAMP UCLA EXTEN to fulfill homework assignment.

Testing Instructions:

The input for users needs to be created

a user called SUPERVISOR first to be created.

Once supervisor is created

On Command line

>node bamazon SUPERVISOR

Then the system will ask for the supervisor password.

Only thru Supervisor option the stocks can be created.

Dependency file is included.
